

On 4-Dec-2020, William Lewis, KG6BAJ, submitted the following proposal to NCPA for consideration and action:

PROPOSAL

I am requesting that the frequency of 145.070, which is currently allocated as "NA" on the digital band plan, to be allocated to the use of "Emergency Packet".

The State of California, Governors Office of Emergency Services is putting forth an effort to have a " statewide " packet channel for EMCOMM groups to use for Emergency Packet.

Currently the state was using 144.910 MHz for their Emergency packet stations, however, that channel can not be used for packet in southern California as it is assigned for Cross-Band repeater and special uses in southern California.

Southern California has 145.070 assigned as a packet channel on their band, and so having the NCPA assign 145.070 as an Emergency Packet (EP) channel in our jurisdiction would then allow the state to have a single channel for statewide emergency Packet operations. The state is investing heavily in Winlink operations on HF and would like as many participating Winlink stations as possible to participate on 2 meters as well.

As soon as the NCPA can agree to the frequency assignment request, the state is prepared to move their stations to the frequency of 145.070 and ask all their participating allied agency EMCOMM stations to join them on that frequency as well.

This would mark the first time that Northern California and Southern California have collaborated at the state level with band planning agencies (Like TASMA and NCPA) to get Emergency Packet on the same frequency for both halves of the state.

I therefore am requesting that the NCPA authorize the Frequency Coordinator to adjust the NCPA digital band plan to allocate the frequency of 145.070 MHz for the use of "Emergency Packet."

This proposal was seconded by Gary Mitchell WB6YRU on 4-Dec-2020.

Voting ended on Thursday 24-Dec-2020 at 14:00 hrs.
